                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       block, which was used to construct chimeric promoters of the invention. The specification describes chimeric expression promoters. These chimeric promoters comprise a nucleic acid sequence which is derived from a first plant promoter, in which a plant vascular expression promoter region is replaced with a nucleic acid sequence derived from a second plant promoter comprising a plant green tissue expression promoter region. Preferably, the first plant promoter originates from Commelina yellow mottle virus, and the second plant promoter originates from the Cassava vein mosaic virus. Especially, the promoters are derived from intergenic regions. The chimeric promoters are useful
             This sequence represents a cassava vein mosaic virus promoter, and is a nucleic acid molecule of the invention. The promoter is capabinitiating transcription of an operably linked heterologous nucleis sequence in a plant cell. The CSVMV promoters are active in both mu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence from with sequence

       The present sequence represents a chimeric promoter of the invention. The specification describes chimeric expression promoters. These chimeric promoters comprise a nucleic acid sequence which is derived from a first plant promoter, in which a plant vascular expression promoter region is replaced with a nucleic acid sequence derived from a second plant promoter comprising a plant green tissue expression promoter region. Preferably, the first plant promoter originates from Commelina yellow mottle virus, and the second plant promoter originates from the Cassava vein mosaic virus. Especially, the promoters are derived from intergenic regions: The chimeric promoters are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and dicot plant species, and therefore can be readily applied to a variety of cultivated crops. Although generally constitutive, the derivative promoters include promoters that can regulate expression tissue-specific manner, and therefore are useful for controlling expression of heterologous genes in a tissue-specific manner. The promoters can be used for producing transgenic plants with an altere
                                                                                                                                                                                      Chimeric expression promoter for transgenic plant production, compris sequence from promoter comprising vascular expression region replaced with sequence from promoter comprising green tissue expression region
                                                                                                                                                                                                                                                                                                                                                                                                                     Chimeric -

                                                                                                                                                         The present sequence represents a chimeric promoter of the invention. The specification describes chimeric expression promoters. These chimeric promoters comprise a nucleic acid sequence which is derived from a first plant promoter, in which a plant vascular expression promoter region is replaced with a nucleic acid sequence derived from
                                                                                                                                                                                                                                                                           Chimeric expression promoter for transgenic plant production, compris sequence from promoter comprising vascular expression region replaced with sequence from promoter comprising green tissue expression region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               chimeric expression promoter; plant vascular expression plant green tissue expression promoter; Cassava vein mon transgenic plant; chimera; ss.
                                                                                        a second plant promoter comprising a plant green tissue expression promoter region. Preferably, the first plant promoter originates from Commelina yellow mottle virus, and the second plant promoter originates from the Cassava vein mosaic virus. Especially, the promoters are derived from intergenic regions. The chimeric promoters are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence

                                                                                                                                                                                                           This sequence represents a cassava vein mosaic virus promoter, and is a nucleic acid molecule of the invention. The promoter is capable of initiating transcription of an operably linked heterologous nucleic acid sequence in a plant cell. The csVMV promoters are active in both monocol and dicot plant species, and therefore can be readily applied to a mid dicot plant species, and therefore can be readily applied to
                                                                                                                                                   variety of cultivated crops. Although generally constitutive, the derivative promoters include promoters that can regulate expression tissue-specific manner, and therefore are useful for controlling expression of heterologous genes in a tissue-specific manner. The promoters can be used for producing transgenic plants with an altered

                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a chimeric promoter of the invention. The specification describes chimeric expression promoters. These chimeric promoters comprise a nucleic acid sequence which is derived from a first plant promoter, in which a plant vascular expression promoter region is replaced with a nucleic acid sequence derived from a second plant promoter comprising a plant green tissue expression promoter region is replaced with a nucleic acid sequence derived from a second plant promoter comprising a plant green tissue expression promoter region. Preferably, the first plant promoter originates from Commelina yellow mottle virus, and the second plant promoter originates from the Cassava vein mosaic virus. Especially, the promoters are derived from intergenic regions. The chimeric promoters are useful
Nucleotide sequence of chimeric expression promoter MPr1162.

The present sequence represents a chimeric promoter of the invention. The specification describes chimeric expression promoters. These chimeric promoters comprise a nucleic acid sequence which is derived from a first plant promoter, in which a plant vascular expression promoter region is replaced with a nucleic acid sequence derived from a second plant promoter comprising a plant green tissue expression promoter region. Preferably, the first plant promoter originates from Commellina yellow mottle virus, and the second plant promoter originates from the Cassava vein mosaic virus. Especially, the promoters are derived from intergenic regions. The chimeric promoters are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Chimeric expression promoter for transgenic plant production, or sequence from promoter comprising vascular expression region rewith sequence from promoter comprising green tissue expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Promoter; intergenic region; Commelina yellow mottle virus; chimeric expression promoter; plant vascular expression promplant green tissue expression promoter; Cassava vein mosaic

The promoter is capable of initiating transcription of an operably linked heterologous nucleic acid sequence in a plant cell. The CsVMV promoters are active in both monocot and dicot plant species, and therefore can be readily applied to a variety of cultivated crops. Although generally constitutive, the derivative promoters include promoters that can regulate expression in a tissue-specific manner, and therefore are useful for controlling expression of heterologous genes in a tissue-specific manner. The promoters can be used for producing transgenic plants with an altered

The promoter is capable continitiating transcription of an operably linked heterologous nucleic ac sequence in a plant cell. The CSVMV promoters are active in both monoc and dicot plant species, and therefore can be readily applied to a variety of cultivated crops. Although generally constitutive, the derivative promoters include promoters that can regulate expression in tissue-specific manner, and therefore are useful for controlling expression of heterologous genes in a tissue-specific manner. The promoters can be used for producing transgenic plants with an altered
                                                                                                                                                                                                                                                                                                                   Promoter; intergenic region; Commelina yellow mottle virus; chimeric expression promoter; plant vascular expression proplant green tissue expression promoter; Cassava vein mosaic transgenic plant; chimera; 88.

      This sequence represents a cassava vein mosaic virus promoter, and is a nucleic acid molecule of the invention. The promoter is capable of initiating transcription of an operably linked heterologous nucleic acid sequence in a plant cell. The CSWMV promoters are active in both monocot and dicot plant species, and therefore can be readily applied to a variety of cultivated crops. Although generally constitutive, the derivative promoters include promoters that can regulate expression in a tissue-specific manner, and therefore are useful for controlling expression of heterologous genes in a tissue-specific manner. The promoters can be used for producing transgenic plants with an altered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence represents a chimeric promoter of the invention. The specification describes chimeric expression promoters. These chimeric promoters comprise a nucleic acid sequence which is derived from a first plant promoter, in which a plant vascular expression promoter region is replaced with a nucleic acid sequence derived from a second plant promoter comprising a plant green tissue expression promoter region. Preferably, the first plant promoter originates from commelina yellow mottle virus, and the second plant promoter originates from the Cassava vein mosaic virus. Especially, the promoters are derived from intergenic regions. The chimeric promoters are useful for producing transgenic regions.
                                                                                                                                                                                                                                                                                                                                                            Disclosure; Page 87; 115pp; English.

sequence from
with sequence
                       The present sequence represents a promoter fragment from the intergenic region of Cassava vain mosaic virus. The promoter is used to construct chimeric expression promoters. These chimeric promoters comprise a nucleic acid sequence which is derived from a first plant promoter, in which a plant vascular expression promoter region is replaced with a nucleic acid sequence derived from a second plant promoter comprising a plant green tissue expression promoter region. Preferably, the first plant promoter originates from Commelina yellow mottle virus, and the second plant promoter originates from the Cassava vein mosaic virus. The chimeric promoters are useful for producing transgenic plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Promoter; intergenic region; chimeric expression promoter; plant green tissue expression

                                                                                                                                                                                                                                                                                                                                                                                The present sequence represents a region which is immediately 5' to the Cassava vein mosaic virus (CsVMV) translational start site. The sequence is used as an enhancer domain in cassettes of the invention. The specification describes an enhancer cassette comprising a duplicated enhancer derived from CsVMV. It can be operably linked to a nucleic acid, the expression of which confers herbicide resistance, fungal, bacterial disease resistance or insect resistance and regulates plant ripening, degradation, colour and sweetness.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Enhancer cassette which forms an promoter useful for manipulating duplicated enhancer derived from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Xu D,

The promoter is capable of initiating transcription of an operably linked heterologous nucleic acid sequence in a plant cell. The CSVMV promoters are active in both monocot and dicot plant species, and therefore can be readily applied to a variety of cultivated crops. Although generally constitutive, the derivative promoters include promoters that can regulate expression in a tissue-specific manner, and therefore are useful for controlling expression of heterologous genes in a tissue-specific manner. The promoters can be used for producing transgenic plants with an altered
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Cassava vein mosaic virus; CsVMV; promoter; cultivated tissue-specific expression control; transgenic plant;

                                                                                                                                                                                                                                                                                            This sequence represents the cassava vein mosaic virus promoter pA, and is a nucleic acid molecule of the invention. The promoter is capable of initiating transcription of an operably linked heterologous nucleic acid sequence in a plant cell. The CsVMV promoters are active in both monocot and dicot plant species, and therefore can be readily applied to a variety of cultivated crops. Although generally constitutive, the derivative promoters include promoters that can regulate expression in a tissue-specific manner, and therefore are useful for controlling expression of heterologous genes in a tissue-specific manner. The promoters can be used for producing transgenic plants with an altered phenotype.

    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nucleic search, using sw model
